## Summary of CV

This section describes briefly a summary of your career in science, academic and research; the main scientific and technological achievements and goals in your line of research in the medium -and long- term. It also includes other important aspects or peculiarities.

I began my research career in 2013 during my undergraduate studies in Biochemistry and Molecular Biology at the University of the Basque Country, investigating the role of microRNAs in chronic lymphocytic leukemia under the supervision of Prof. África García Orad. Later in 2016, I joined the laboratory of Prof. Xose Antón Suárez Puente at the University of Oviedo, where I completed both my Master's and PhD in Biomedicine and Molecular Oncology, co-supervised by Dr. Ana Gutiérrez Fernández and funded by an FPI PhD Fellowship (a very competitive fellowship awarded by the Basque Government). My Doctoral Thesis focused on the study of non-coding mutations in cancer, particularly in hematological malignancies, integrating molecular and cellular biology with bioinformatic analyses of genomes, exomes, and transcriptomes. During this period, I contributed to the discovery and experimental validation of a recurrent mutation in the small nuclear RNA U1 across different cancer types, published in Nature, for which I am co-first author. I also conducted a research stay at the University of Oulu (Finland) under the supervision of Dr. Valerio Izzi, funded by an EMBO Scientific Exchange Grant. There, I specialized in the analysis of the extracellular matrix and the impact of U1 mutations on the tumor microenvironment, resulting in an additional publication. For my Doctoral Thesis, I was awarded the "International PhD" with "Summa Cum Laude" distinction and the "Extraordinary Doctoral Award" from the University of Oviedo, in recognition of the excellence of my dissertation.

In 2023, I began my postdoctoral project at the University of Toronto and the Ontario Institute for Cancer Research under the supervision of Dr. Lincoln Stein and Dr. Bo Wang, supported by a Fellowship in Genome Data Science co-funded by CANSSI Ontario and Ontario Genomics. There, I developed an artificial intelligence algorithm capable of generating synthetic tumors to evaluate and improve genomic analysis tools. This work was published in Cell Genomics, where I am first and co-corresponding author. The presentation of this project earned me the "Ontario Rising Stars in Cancer Research Network Award" at the OICR Translational Research Conference. Currently, to foster the use of this tool, I co-lead a multidisciplinary working group within the International Cancer Genome Consortium (ICGC-ARGO).

To date, I have published 17 articles in high-impact journals (11 in D1, 2 in Q1), which have collectively been cited more than 1,125 times, as well as 2 preprints that have been presented at national and international conferences. Of these publications, I am first or co-first author in three and corresponding author in two. I have also served as a peer reviewer for journals such as BioData Mining and Microbial Genomics.

In addition to research, I have developed a strong vocation for teaching and knowledge transfer. During my doctoral studies, I delivered 130 hours of lectures in Health Sciences, taught the "BioData" course at the University of Oulu, and supervised a Master's thesis. Furthermore, I am co-founder of the "Asturias R Group," a non-profit association that promotes the use of R through courses and scientific visualization contests for students, teachers, and researchers, in collaboration with other research centers such as the Foundation for Biosanitary Research and Innovation of the Principality of Asturias (FINBA).
